Duolin Inhaler, PRESCRIPTION MEDICINE. Duolin Inhaler contains Salbutamol (as sulphate) 100 mcg and Ipratropium bromide 20 mcg per actuation. Each Duolin Inhaler contains 200 actuations. Duolin Inhaler is used for the treatment of obstructive airway diseases such as COPD, bronchitis and emphysema. Duolin Inhaler has risks and benefits. Do not use Duolin Inhaler if you are allergic to salbutamol, ipratropium bromide, or any of the other ingredients of Duolin Inhaler. In patients who find coordination of a pressurised metered dose inhaler difficult, it may be better for you to use a spacer device with your Duolin Inhaler. Ask your doctor or your pharmacist to explain how to use it, or follow the instructions provided with the spacer. Always use Duolin Inhaler exactly as your doctor or respiratory nurse has told you. Duolin Inhaler is for oral inhalation only. If you have any concerns, discuss them with your doctor or respiratory nurse. Discuss your asthma or chronic obstructive pulmonary disease (COPD) symptoms with your doctor or pharmacist and ask whether Duolin Inhaler is the appropriate choice for you. Duolin Inhaler is fully funded. Standard doctor's fees and pharmacy charges apply. Duolin Inhaler is distributed by REX Medical Ltd, Auckland, New Zealand. © REX Medical Ltd TAPS NA 11666 | CC200122 v1
